Printing a page

If you're using Frog as a teaching resource and have you lesson plans on it, at some point you will need to print pages from Frog.

Due to Frog's nature of being a single web page system, the browser's print function can get confused.   With this in mind, we have added the ability to print a page in Frog.

To print a page:

- Click on the **Site menu** in the **top-left corner** of the FrogBar
- Click **Print Current Page**

This sends just the information about the current page to the browser's printer function and you can print from as you would with any other webpage.
