Sites in FrogDrive

FrogDrive is your access to everything on Frog. Your school Frog admin may have set up direct links to areas on your dashboards, but FrogDrive allows you find them yourself.

To get started:

- Open **FrogDrive**
- Click on **Sites**

This will show you your sites. You have a search option here, allowing you to search for both your sites and any sites on Frog you have access to.   For instance, if I search for **%** I can return all sites on Frog I'm allowed to see.   I can search for site names and sites creators here.

Your school Frog admin has additional search abilities and can view any site or personal dashboard on Frog.

Underneath My Sites in the menu on the left, we have a series of titles, these correspond to the Tags categories you can add when sharing. In the Sharing video, we shared a site with the tag Chemistry.   I can now click into the Curricular section and then click on the Chemistry icon and there is the site.

I can open any of these sites by double-clicking, but if I single-click in the My Sites section, it is highlighted in blue and if I now click the Action Cog, I can see I have options and shortcuts relevant to the site.
