

Setting up Google Integration – Frog Administrators

There are several different levels of Google integration with Frog and as your school's Frog admin, it will be up to you to set these up. Frog's Service Desk can and will help you as much as possible, but integration set up requires access to your school's Google Webmaster tools – so you will have to do some of the work.

Complete documentation to Google integration is available on our community site:

<https://www.frogeducation.com/community/tutorials/googleint>

These guides include set up instructions, although Google's layout and buttons may have changed.

As you may have gathered, we cannot set up a Google account for your school. Google have a very simple process to do this, which you can access here:

<https://gsuite.google.com/signup/edu/welcome>

Authentication

- **Frog can serve as the authentication source for Google.** Meaning that logging into Frog will be all a user is required to do to access Google.
- **Google can be Frog's authentication source.** This is especially popular with schools who have 1:1 Chromebooks as the Google-powered device can then open Frog directly.

Google Drives with FrogDrive

Separate to authentication, there is the ability for users to see their **Google Drives within Frog**. Following the guide on the Community, you can **enable this in System Preferences**. You set up the initial Client ID and Client Secret keys, available through Google's Webmaster tools then individuals will be prompted to link their accounts.

There is a video for staff and students that walks them through linking their account to Frog and includes instructions for unlinking. However, it's always possible you will be asked to unlink the Google account for them. You can't, but the Service Desk can.

When FrogDrive is enabled, two new widgets become available. The **Google Preview** widget and the **Google Activity** widget. Google Preview enables Google documents to be embedded inside pages in Frog and Google Activity enables teachers to base homeworks around Google Docs.

Google Integration – Frog Administrators (cont.)

Setting up User accounts to use Google for homework

The final level of integration is also around homeworks. Frog can handle Google sharing during the assignment process. In order for this to work, each student account needs to be updated with their corresponding Google ID:

- In the **Users** app
- Open the **Action Cog**
- Choose **Export by Profile > Export Student Users**
- In the downloaded spreadsheet, update the column **Google ID** column with the students' **Gmail address**
- Back in the **Users** app,
- Open the **Action Cog**
- Choose **Import** and follow the steps with the wizard.

You can add the Google ID to individuals in the **Users** app:

- Selecting the account in question
- Choosing **Edit**
- Switching to the **Additional Information** section
- Entering the **Google ID** into the field
- Clicking **Save**
