

A top-down view of a desk with a laptop, keyboard, mouse, and a small plant. The laptop screen shows a website with a form. The keyboard is white, and the mouse is grey. A small green plant is in the top right corner.

Paragraph Field

The paragraph field allows you to collect data based on multiple lines of text. This field is useful if you want to collect information that could potentially be quite large or, for example an address.

I'll add the Paragraph field to my canvas, and I'll start to add my label in the settings. This form will be used for parents to update their contact information and I want them to add their address into this box, so I'll simply enter please update your address below.

I can add some hint text if necessary, but I'll skip that option and select which field size I would like. I'll change this to medium to allow for an address and you can see the size of the field increases in the canvas as I make my selection.

At the bottom, I'll add a description to ask users to input their address on multiple lines to match the format of a letter.
