MIS Linked Documents

The MIS Linked Documents widget lists documents assigned to a student for the period specified in the Select Date widget therefore, the Select date widget needs to be used in conjunction with this widget in order for it to work effectively. Without the select date widget, the information displayed will only go back as far as the start of the current month.

It's important to note that this widget searches for documents based on their creation date within the schools MIS database. This means that if the document was created in February but only uploaded to Frog in May, then you would have to use the select date widget to filter back to the creation date in February, not the date it was uploaded.

There are no settings you can change in the edit panel for this widget.
