Attendance Summary

The attendance summary widget is a simple widget that displays a summary of your child's attendance in a small table. Administrators can choose to display the overall percentage attendance, the total authorised absences and total unauthorised absences.

Again, the select date widget is also present here so I can select a date range for the information I want to display. I only want to display a weeks' worth of information, so I'll select those dates now.

In this example the administrator has opted to show all three bits of data so I can see that this child's attendance was 80% this week with no authorised absences and 2 unauthorised absences.
