

A top-down view of a desk with a laptop, keyboard, mouse, and a small plant. The laptop screen shows a website with a person's photo and some text. The keyboard is white, and the mouse is black. A small green plant is in the top right corner.

Behaviour Totals

The behaviour totals widget simply displays the amount of behaviour incidents associated with your child in a table format.

The select user widget is used to select a child and this is the only widget that can be used in conjunction with the behaviour totals. As you can see there is both positive and negative behaviour information in this table, giving you a quick overview on the number of total incidents.

The widget displays the total amount of behaviour incidents logged in the previous month and then a running total of the whole year.
